## Horizontal Conveyor

Direct connection to the tilt-table, in line or at 90° to running direction. The continuous chain driven system, has support bars for carrying the freely rotation rollers that support the glass units. This allows units to be taken off the conveyor from the side to the sealing tables without stopping the conveyor. The stepped control system allows units to be stored along the complete length of the conveyor, at the end of which a safety switch is located.

### Special Features:

- Convenient movement of glass units on free running rollers
- Max glass size depends on the tilting table before it
- Min glass size 350 x 180 mm
